

Reflection About Seminar 1

- **Approximately how much time, including lectures and exercises, have you spent preparing for the seminar?**

Preparing for the seminars, lectures and exercises took about 18 hours.

- **What have you learned from the problems presented?**

The learning outcome for me was to analyse a specification in a clear way using some guidelines. In other words, I've learned that I have to think extra and from different angles when analysing.

- **What was difficult and what was easy?**

The only challenging part in this task was to find appropriate class candidates. Otherwise, this task had a moderate difficulty level.

- **How have you worked when solving the problems?**

Solving this task involved a lot of discussions with other group members as well as following the recommended guidelines for solving the task. We tried to follow all the steps mentioned in the lectures and the book.

- **What questions remain regarding the problems?**

Fortunately, we got answers to all questions during the tutorials.

- **Do you have any suggestions regarding the course? Both suggestions for this course instance and for coming years are of interest.**

So far, everything is perfectly clear. The book really helped us when solving the task, and I appreciate that there are several tutorials during a week to get help, and I think it is necessary to have multiple chances for getting help since the tasks are pretty detailed and time consuming.
